92 Further Information
Disability tennis is simply the general term we use to describe the various versions of tennis that are on offer for disabled people to have fun playing.

Tennis is a completely inclusive sport with everyone being able to participate in its full format or when adapted. The most well-known versions are deaf, learning disability, wheelchair and visually impaired tennis but the sport is adaptable to a wide range of disabilities. But social play isn't restricted to a particular type of tennis; disabled people can play against their non-disabled friends or family and take part in inclusive sessions and/or impairment-specific sessions depending on their preference.

Tennis doesn’t just offer people the chance to develop their fitness and coordination, but also to build social skills, confidence, self-esteem and independence. That’s why the Tennis Foundation is supporting both coaches and venues to help them to offer improved opportunities to disabled people. This includes people trying the sport for the first time through to elite performance, as well as putting on competitions and major events.

About The Tennis Foundation

The Tennis Foundation is Great Britain’s leading tennis charity and our vision is a sport that is inclusive and accessible to every kind of community. Our aim is to provide opportunities to encourage people to both play and enjoy tennis, as well as to maximise their personal potential through the sport. We’re doing this by engaging all parts of the community, recognising diversity and promoting inclusion.

Through our focus on tennis in education, within the community, and within the disability community in particular, we’re promoting tennis as an inclusive sport and helping more people play.

We are working closely with the Lawn Tennis Association (LTA) and a wide range of other partners to deliver our vision.
Tennis is a sport which lends itself to integration and inclusion and those are our long-term aims. All disabled people can participate in tennis either in its full (‘traditional’) format or when adapted.

The core activities through which the Tennis Foundation aims to achieve its vision are:

- **Education**
  Equipping people and organisations with the knowledge and awareness required to make their full contributions to the growing of disability tennis.

- **Motivation**
  Inspiring, encouraging and incentivising people and organisations to engage fully and positively with tennis.

- **Partnership**
  Working effectively with LTA colleagues and external partners to facilitate the growth and development of the sport.

The diagram below illustrates simply how our goals can be realised through our core activities in each of these three vision areas.

### Background

Nineteen per cent of the UK population are disabled or have a long-term limiting illness, so it is essential that coaches and other members of the tennis workforce be given the skills and information necessary to communicate and engage with these individuals. As part of the Tennis Foundation and LTA’s ongoing commitment to this area, there are a number of development opportunities available to coaches at tennis venues.

### Disability Tennis Networks

The Tennis Foundation is supporting a number of Disability Tennis Networks across Great Britain with advice, funding and equipment to increase participation locally. These Networks are made up of a number of clubs and community tennis venues with links to schools and disability organisations. They run impairment-specific sessions as part of their tennis programme. You can view the locations of the Networks on the Tennis Foundation website.
**Impairment Considerations**

Tennis offers a range of opportunities for disabled people in inclusive environments playing with non-disabled players and also focuses on four specific impairment groups: deaf, learning disability, wheelchair and visually impaired. Further information on each of these can be found later in this resource.

Within disability sport you will find players with:

- A physical impairment.
- A learning disability.
- A sensory impairment such as a visual or hearing impairment.

You need to consider whether their impairment is minimal or severe, congenital or acquired, progressive or non-progressive. You then need to consider how the impairment may affect their participation and the additional barriers that particular player may face.

**Physical Impairments**

Physical impairments include:

- Amputation.
- Spinal cord injury.
- Brittle bones (osteogenesis imperfecta).
- Cerebral palsy.
- Muscular dystrophy.
- Multiple sclerosis (MS).
- Dwarfism.
- Epilepsy.
- Pulmonary disease.
- Respiratory disorders.
- Spina bifida.

It is important to realise that a physically disabled person may be ambulant (able to walk) or use a wheelchair. Those that are ambulant may use a wheelchair to play tennis but not everyone will feel comfortable using a sports chair if they don’t use a wheelchair on a daily basis, so you may need to look at other suitable adaptions.

**Learning Disability**

Players with a learning disability, for example those with Down’s syndrome or autism, will usually have an intelligence quotient (IQ) of less than 70. However, not all individuals on the autistic spectrum will have a learning disability, e.g. those with Asperger’s syndrome have a learning difficulty as opposed to a learning disability (but they are included within the learning disability category for the purposes of this resource). Think about the practical implications for individual players depending on their own specific learning disabilities.

Learning disabilities include, but are not limited to:

- Autism spectrum disorders, including Asperger’s syndrome.
- Attention deficit hyperactivity disorder (ADHD).
- Down’s syndrome.

**Sensory Impairments**

Sensory impairments include hearing and visual impairments.

- Visual impairments will vary in severity from partially sighted to totally blind.
- Hearing impairments will vary in severity from mild to total deafness.

**Participant Groupings (As Percentage Of Disabled Population)**

- Physical – 6%.
- Learning Disability – 19%.
- Sensory – 7%.

It’s important to remember there is a large overall population percentage with other disabilities or long-term limiting illnesses.
Inclusive Tennis

Research from the English Federation of Disability Sport (EFDS) shows that it’s likely that a disabled person will just join in an existing tennis session. As a coach, your most likely scenario will be adapting your session to include them, rather than having enough demand to put on a whole new session for a specific impairment group.

There are some simple considerations to make as a useful starting point for working in a more inclusive manner. Key considerations include the type of illness, impairment or disability, the severity of the illness, impairment or disability and whether it is congenital or acquired.

The Functional Approach and STEPS provide useful frameworks to follow in preparing tennis sessions for disabled people and those with a long-term limiting illness. In every circumstance as coaches, we want to provide the Optimal Challenge for the individual we are working with.

<table>
<thead>
<tr>
<th>Functional approach</th>
<th>STEPS (considerations for inclusive tennis)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consider the functional ability of the player</td>
<td>• Space – what is required to make the activity successful?</td>
</tr>
<tr>
<td>Assess the impact of this on their chosen sporting activity</td>
<td>• Task – how can it be adapted to make it appropriate?</td>
</tr>
<tr>
<td>Determine how the environment affects a person’s functional ability</td>
<td>• Equipment – how can it be adapted to make it appropriate?</td>
</tr>
<tr>
<td>Look at what other factors can impinge on a person’s ability to participate</td>
<td>• People – are additional coaches or volunteers required?</td>
</tr>
<tr>
<td>Safety – what is required to ensure the session is safe for all participants</td>
<td></td>
</tr>
</tbody>
</table>

You can view STEPS for specific impairments in the relevant sections later in the resource.

Adapting Activities

When adapting an activity there are four considerations to make. Are there activities that are sufficiently open to include and remain beneficial to all abilities; does the activity need to be modified to include all participants; can the activity be run with parallel groupings to ensure it is delivered at an appropriate level to all; or does the activity need to be specific and run separately for the group or individual? For example:

- Open activity – requires no alteration to the tennis session, e.g. single-arm amputee joining in with existing activity and competition.
- Modified activity – uses adaptations and modifications to ensure session challenges and supports all abilities, e.g. integrating wheelchair tennis player into existing activity and competition, and allowing wheelchair player two bounces.
- Parallel activity – use differentiation in sessions ensuring that players complete similar tasks but are grouped by ability/impairment, e.g. grouping special school pupils by ability to ensure enjoyment by all.
- Separate/discrete activity – tennis sessions specific to disabled persons’ requirements and rules for specific impairment groups, e.g. visually impaired tennis is played within service boxes with an audible ball and multiple bounces.
Adaptations

General Adaptations
General adaptations that may help you deliver tennis to disabled people include the following:

- Change the size of the court/playing area.
- Change the size or type of targets being used in some activities and games.
- Change the scoring method – Mini Tennis uses simple tiebreak scoring (i.e. first to 10 points, rather than traditional tennis scoring).
- If wheelchair players are involved, ensure each activity is able to be completed from a seated position.
- Ensure each activity is practised from a static position, before introducing movement.
- Give players more time to react, by allowing more than one bounce before the ball is caught/hit.
- Shorten the distance the ball has to be hit/thrown/rolled.
- Use a ‘sound ball’.
- Use non-verbal communication.

Adapting Equipment
A wide range of innovative equipment is available to make the delivery of tennis fun, exciting and achievable for all.

In general, you could:

- Use softer and/or larger balls to make hitting, catching and throwing activities easier.
- Use alternatives to balls – beanbags, balloons, fluff balls, ‘sound balls’ (see next page).
- Use brightly coloured balls or those with bells inside to assist players with a visual impairment.
- Use alternatives to rackets – ‘hitting hands’ or ‘smiley face hitting pads’ (see next page).
- Use rackets with shorter handles, but large hitting areas, to enable people to quickly achieve success.
- Use tape or straps to assist players with limited grip to hold the racket.
- Use additional grips to make it easier for people to hold and control the racket.
- Use a tee to enable the ball to be served or hit from a stationary position in some activities.

Disability Tennis Resources
There are a number of resources available to coaches to assist in delivering disability tennis. Some of these are outlined overleaf but please contact the Tennis Foundation if you require any further information.

Equipment
The following items are included in the Disability Tennis Equipment pack that has been distributed to a number of venues. For more information please contact the Tennis Foundation.

Mini Tennis Rackets
Mini Tennis rackets have shorter handles and large faces, making it easier for people to make contact with the ball successfully.

Mini Tennis Balls
Sponge Mini Tennis balls are ideal for use indoors, with low-compression felt Mini Tennis balls better for use outdoors. They both travel slower through the air, making it easier for players to track and receive the ball successfully.

Hitting Hands
Hitting hands are an alternative to using rackets. They simply slip onto a player’s hand to increase the hitting area available.

Mini Tennis Nets
Mini Tennis nets are quick and easy to assemble and a great way to aid playing tennis. Barrier tape is also a cost-effective and quick way of creating additional nets.

Juggle Squares
Juggle squares can be used by players with limited functional ability and their tactile, colourful nature makes them an ideal tool to assist with catching activities.

Arrow Markers
These can be used quickly and effectively for a range of different activities including demonstrating the direction of travel.

Fluff Balls
Fluff balls can also be used by players with limited functional ability and their tactile nature makes them an ideal tool to assist with catching activities.

Balloon Balls and Smiley Face Hitting Pads
These are ideal for practising throwing and hitting activities. A balloon is inserted inside the machine-washable material ball and they are caught on the Velcro smiley face hitting pad.
Coaching Opportunities

Coaches who want to get involved in disability tennis can follow the same pathway as they would with non-disabled coaching by becoming a licensed LTA coach. You can view that pathway below and visit the LTA website for further information.

As part of this pathway there are Continuing Professional Development (CPD) modules specifically for Deaf, Learning Disability, Visually Impaired and Wheelchair Tennis, with licence points available to those who attend.

For more information on when and where these courses will be taking place, please visit www.lta.org.uk/coaching.

"I love coaching disability tennis as every lesson is different and I’m always thinking of new ideas and teaching styles to help players of all different abilities. Every time a player walks off my court they have a smile on their face and they really appreciate my efforts in teaching them, which makes my job so much more enjoyable."

Andy Jeffery, Head of Disability Tennis, Sutton Tennis Academy

Inclusive Schools Support

Many disabled young people have the ability to participate fully in tennis, with little or no adaptations. However, for some pupils with more limited functional or physical abilities, tennis activities can be adapted to ensure that all young people enjoy their experience and can achieve. To support teachers in special schools, and those teaching disabled young people in mainstream education, we have developed a package of innovative training, resources and equipment as follows:

**Free Inclusive Tennis Resource**

Through Mini Tennis, the modified version of the game, this new resource provides guidance to empower teachers to deliver tennis effectively in special schools, and to disabled young people in mainstream education. The resource is focused around a series of activity cards, but also provides information on adaptations, equipment, the use of Makaton (refer to Deaf Tennis section for more information on the use of Makaton), player pathways and celebrating success.

**Inclusive Tennis Teacher Training Course**

The three-hour Inclusive Tennis Teacher Training Course has been designed to give teachers and teaching assistants in special schools, and those teaching disabled young people in mainstream education, the confidence and tools to deliver tennis to a class of children in a small space. The course is supported by a resource and equipment pack.

Each teacher attending the course receives:

- Schools Tennis Inclusive Equipment Pack (limited to one per school and only if your school has not previously received one).
- Special Schools Tennis Teacher Resource.
- Guide to Schools Tennis.
- Schools Tennis Competition Guide.
- Tennis Activity Week Pack (cross-curricular resource).
- Out of School Hours Tennis Club Toolkit.

To book on a course and receive the above resources, visit [www.schoolstennis.org](http://www.schoolstennis.org).

**Digital Resources**

There are several DVDs available and the USB stick that comes with this resource pack contains the following films:

- Anyone for Tennis?
- Anyone for Wheelchair Tennis?
- British Open Wheelchair Championships.
- Cardio Wheelchair Tennis.
- Coaches Symposium.
- Deaf Tennis National Championships.
- Dwarf Sports Tennis.
- Edgbaston Priory Club Special Schools Tournament.
- Learning Disability Tennis.
- Visually Impaired Tennis.
- Wheelchair Tennis Camp.
- Wheelchair Tennis at Wimbledon.

Further videos are on the Tennis Foundation website.

**Free Inclusive Tennis Equipment Pack**

The Tennis Foundation is also delighted to offer a number of special schools a free Schools Tennis Equipment Pack, worth a retail value of £500. This pack includes a range of modified and adapted equipment, specifically designed for use by disabled young people.
Disability Tennis Festivals

This is a guide on how to plan a successful festival or open day to show disabled people the opportunities available to them within tennis. The information provided is based on case studies of successful programmes that have held or currently hold tennis festivals across the UK.

Purpose

Well-organised festivals are a great way of attracting and retaining new players within the sport. It is possible to run a festival for all ages, abilities and disabilities at the same time if you have enough space.

Successful Marketing of Your Festival

Effective forward planning is essential for good levels of attendance. You should consider the following:

Target Audience

Consider your target audience when putting together promotional material. Avoid complicated terminology and keep any marketing materials simple.

What can you offer attendees in the way of follow-on opportunities? This will determine your target market and where you should attract participants from.

Product

Are you offering something to overcome some of the barriers participants might face? For example, sign language communicators on site or perhaps free accessible transport to your venue.

What is Your Unique Selling Point?

Examples might be trained coaches/indoor courts/great location/first session of its kind in the area. Remember, tennis is a completely inclusive sport and players of all abilities can play with disabled or non-disabled peers, friends and family.

Price and Booking

It is recommended that the festival is free to attend. Follow-on opportunities need to be sensitively priced and affordable. To help plan activities, it is strongly recommended that pre-booking is made available but be flexible enough to accept people on the day.

Place

In your promotional material explain the convenience and benefits of your venue. Make this information available in your first communication as this can be the first barrier to people attending. If you have good transport links then mention this, as transport can often be a barrier.

Promotion

There are many ways to promote your festival, many of which are listed below. You need to be able to contact the relevant people in plenty of time. As a guideline, a minimum of three months is suggested.

• Local disability groups.
• Social media.
• Local Tennis Development Officer.
• Schools games organisers.
• Local press/disability magazines.
• Disability sport contact/officer for the area.
• Sports development department at local authority.
• Special schools.
• Specialist Inclusive Learning Centres.
• Mainstream schools (due to an increasing number of children with impairments who need specialised support).
• Community sports partnerships.
• Adult social care.
• Relevant charities.
• Other local sports groups.

After the initial festival, inform relevant groups about follow-on activities and any other festivals you are planning. Please ensure you contact the Tennis Foundation about any activity you are organising, as we can help to support your promotion.

Getting the Message Out There

If you have appointed a press officer, this will really help to publicise the event and follow-on opportunities. If not, then write a short, snappy report yourself. Include photos from the event and send to the local press and the Tennis Foundation. It’s always helpful to follow up with a phone call to relevant media.

Timing

This will be dependent on when you are ready to deliver your programme. Do not run a festival without having follow-up opportunities available. The start of the
summer term has proved easier than the end of a term to organise school events. A well-organised event can run within two hours but longer day-festivals can be popular.

**Equipment**

For wheelchair sessions a minimum of two sports wheelchairs are needed for people to try. In the promotional material, encourage anyone with their own sports chair to bring it along. Make sure that ‘sound balls’ are available and plenty of different-sized rackets. Also have lots of cones, lines and a range of Mini Tennis balls and full balls. If you have a disability tennis or special schools bag, the adapted equipment contained in those should be used. The Tennis Foundation and Dan Maskell Tennis Trust can assist you if you do not have any sports wheelchairs.

**Staffing the Event**

Make sure you have enough staff to provide at least one person per planned activity/station. Staff and volunteers may feel apprehensive about their roles and therefore pre-festival training is vital. Training the coaches in advance is key, as volunteers and helpers can be given basic training on the day. Don’t forget to reward your volunteers.

**On the Day**

Sign people in. Have a register of pre-booked attendees and the ability to record attendees that turn up on the day. Make sure you have a ‘photo consent’ box and that participants have indicated whether this is permissible. Have a column for preferred method of communication after the event. Take participants’ email address and phone number; do not rely on them contacting you. Let attendees know that if they are interested in signing up for follow-on opportunities that they can do so on the day. Maybe offer a T-shirt/reward/discount for booking and paying on the day. Take lots of photos.

**Possible Activity**

The court plan will depend on who you are trying to attract into the programme, and your available facilities and staffing. Two examples are as follows:

**Example 1 – Festival for all ages, six indoor courts, aim is to attract both disabled and non-disabled players.**

- **Mini Tennis / Tennis Xpress**
  - Court 1 – Visually impaired (VI)
  - Court 2 – Wheelchair
  - Court 3 – Ambulant (including deaf) players
  - Court 4 – Beginner adults

- **Full Court Tennis**
  - Court 5 – Beat the pro (get local performance players to support the event)
  - Court 6 – Cardio (this court positioned on the opposite side of the venue from VI, so the noise from the music does not interfere with the VI activity)

**Example 2 – Festival for juniors with disabilities, 2 -3 courts**

Set up stations based on the adapted activity cards, followed by group-based activities over the courts split into mini-red courts. (N.B. orange balls may be more suitable for beginner wheelchair players to give them more time to reach the ball.)

**When Participants Leave the Session**

All participants should receive a pack with details of follow-on opportunities. Can you include some freebies? Say that you will follow up with a communication within one week. Make sure this happens, otherwise people’s trust will be lost before you have even started.

**Debrief**

It is really important once the session has finished and the equipment has been packed away that you review the session with the coaches and staff, whilst it is fresh in everyone’s minds.

**Keep Planning**

Hopefully you have had a great day and you have managed to attract players into your programme. Regardless of how successful this particular programme has been, use your experience from this event to make your next festival even better!
Communication

Communication is key to all coaching and this is particularly the case when coaching disabled players as you may have players on court with a variety of different considerations to take into account. It is important you find these out before you start a session. Below are some top tips to help you.

Thinking About What We Say – Positive Behaviour

In considering the rules that guide positive behaviour, don’t assume that:

1. Disabled people either want or require your assistance.
2. Saying ‘no thanks’ to your offer of assistance (no matter how well-meaning your offer was) is meant as a personal affront.
3. If the disabled person does accept your offer of assistance that you then know exactly what to do, and proceed to do it for them without further discussion.
4. A person who appears to have a particular disability also has other disabilities.
5. Disabled people are worse off than non-disabled people, and therefore should be pitied (‘Ah, bless them’).
6. A person who does not have an obvious or visible disability, or who uses assistive devices intermittently instead of all the time, is faking, imagining, or pretending to have a disability.
7. If someone isn’t using a wheelchair, that they are not really disabled.
8. Companions accompanying a disabled person are solely there to assist; it may be that someone with a disabled person is their partner or friend, not their ‘carer’.
9. Disabled people (particularly people with learning disabilities) are not capable of finishing their own sentences.
10. Disabled people should be treated as children (whether in the way you talk or the things you do, e.g. patting people on the head).

Additionally, there are some golden rules, which you should adhere to:

1. When asking questions, pose them to the person you are talking to (i.e. the disabled person), not the people accompanying them (e.g. a parent, carer or interpreter).
2. Give change, bills or receipts to the disabled person if they have paid for the product or service.
3. Only ask personal questions regarding development or acquisition of the person’s disability if you know them well enough to do that.
4. If you are talking to someone who uses a wheelchair, do not bend over them or squat down. If it is appropriate to sit on a chair/bench next to the person then do so, but do not make an extra-special effort to go and get a chair or bench so that you can sit down because the person you are talking to is using a wheelchair.
5. Do not lean on, hold on to, start moving (i.e. pushing backward or forward), or tap with your toes, a disabled person’s wheelchair. And if the person is not sitting in their wheelchair, do not sit in it yourself!
6. When you enter a room, and you know that at least one of the people in the room has a visual impairment, always introduce yourself.

Camps

The Tennis Foundation runs camps nationwide so players can have fun playing wheelchair, learning disability, deaf or visually impaired tennis. The camps provide opportunities for beginner and developing players to spend time on the tennis court with all equipment provided, and accommodation is available at discounted prices. Players will be grouped according to their ability so that they get the most out of the camp. Talent ID coaches will also be on hand to find players with the potential to join a performance pathway.

If you’d like to find out more, please email the Tennis Foundation: disabilitytennis@tennisfoundation.org.uk.

---

1. These are written under the assumption that the interaction is occurring between a disabled person and a non-disabled person, or two disabled people with different disabilities.
2. There may well be exceptions to this if you are working within a coaching environment and specific knowledge relating to the person’s disability will allow functional ability to be identified, or to ensure that individual’s or others’ safety.
Deaf Tennis

Find out more at www.deaftennis.org.uk
Deaf Tennis

Deaf tennis has a long history in British tennis and playing the sport requires no adaption apart from making sure communication is clear between players, coaches and officials. People can play against other deaf tennis players, and alongside or against non-disabled friends and family.

Coaching Tennis to Deaf People

The aim of this section is to give tennis coaches or volunteers an insight into deafness, the barriers deaf people face to play tennis and the various communication methods you can use to deliver effective and productive tennis coaching to deaf players.

Deaf people have different levels of hearing, from mild to total deafness. This could include temporary deafness such as glue ear. For the purposes of this resource we are using the term ‘deaf’ to mean all types of deafness; this includes those who may consider themselves ‘hard of hearing’.

Deafness is a hidden disability and it is sometimes hard to know whether someone has a hearing impairment and may require additional communication requirements. It is important to bear in mind that it may be more difficult for a new player who is deaf to acquire the confidence to mix with others and develop tennis skills. This section also gives coaches or volunteers an insight into deafness, the barriers deaf people face to play tennis, and the various communication methods you can use to deliver effective coaching.

Those who are deaf will have varying levels of hearing and may or may not choose to wear their hearing aid during your coaching session. Please remember that wearing a hearing aid (or cochlear implant) neither corrects language nor restores perfect hearing. Coaching deaf people is essentially down to your communication skills as a coach. As with all new participants, speak to them before the start of their first session to establish a mutually acceptable method of communication. There are a variety of ways to communicate, and each deaf person is best placed to tell you what works best for them. To get things started, try communicating through basic gestures or use a pen and notepad if needed.

Visual Signals

Visual signals are vital for activities involving deaf players. The benefits of the signals are twofold. Firstly, for practical reasons, as deaf players may not be able to hear or understand a leader speaking or hear a whistle being blown whilst they are concentratng on an activity or game. A visual signal helps a player to fully understand what is going on. Secondly, visual signals are used for health and safety reasons, such as when an activity needs to be stopped due to a danger or injury.

You should check with the player first, but some suggested visual signals include:

- Raising an arm to signify players should stop what they are doing and pay attention to the leader.

Deafness is a hidden disability and it is sometimes hard to know whether someone has a hearing impairment and may require additional communication requirements. It is important to bear in mind that it may be more difficult for a new player who is deaf to acquire the confidence to mix with new people and to learn a new sport due to potential communication barriers.

Some deaf people may have additional physical disabilities but most have the same physical capabilities as any other person.

<table>
<thead>
<tr>
<th>Deaf</th>
</tr>
</thead>
<tbody>
<tr>
<td>Position yourself so the player can see your face and lips. Be expressive and use body language.</td>
</tr>
<tr>
<td>Check engagement and understanding regularly.</td>
</tr>
<tr>
<td>If needs be, gain attention by tapping on shoulder, waving, or asking another person to get their attention.</td>
</tr>
<tr>
<td>Provide a pad and pen to write things down during a session if needs be. Or you can use modern technology, such as a tablet or smartphone.</td>
</tr>
<tr>
<td>Remove sunglasses when communicating so the player can see your whole face when lip-reading.</td>
</tr>
<tr>
<td>Provide written information for the player to read after coaching sessions.</td>
</tr>
<tr>
<td>Learn basic fingerspelling (or even British Sign Language if you can).</td>
</tr>
<tr>
<td>Teach the coach how to lip-read.</td>
</tr>
<tr>
<td>Provide a deaf telephone (DTT).</td>
</tr>
<tr>
<td>Provide a TTY.</td>
</tr>
<tr>
<td>Provide written information for the player to read after coaching sessions.</td>
</tr>
<tr>
<td>Use visual aids wherever possible to demonstrate drills and practices.</td>
</tr>
<tr>
<td>Ensure you have a procedure in the event of a fire alarm, for e.g. raising both arms or flashing lights.</td>
</tr>
</tbody>
</table>

Deafness is a hidden disability and it is sometimes hard to know whether someone has a hearing impairment and may require additional communication requirements.
• Raising and waving a brightly coloured bib/cone/flag/shirt if you want the session to stop immediately or for them to change direction, etc. (Always use the same colour so players know exactly what it means.)

Demonstrating

Very little adaptation is needed from the coaching of physical activities involving hearing players. It is simply a case of using common-sense communication techniques and using clear visual signals to ensure you are communicating clearly with the group. When delivering any activities, it is always best to demonstrate what you wish the group to do beforehand and keep it simple and brief. By using demonstrations, the group will have a visual representation of how to do each activity. This helps deaf players understand what to do – and it’s a particularly useful tool for all players, deaf and hearing.

Try using the following simple steps:
1. Briefly explain what the activity involves and what you wish the group to do.
2. Demonstrate the activity, but remember – do not speak while doing the demonstration.
3. Check for understanding (repeat if anyone has not understood and check their facial expressions and body language to see if they have understood).
4. Start the activity. Have a practice run first so no one gets upset if they do it wrong the first time.

Communication Tips

When communicating with deaf people it is important not to make preconceived assumptions about how that person may wish to receive information. In order to ensure that the communication process is appropriate, consider some of the following pointers:

Do:
• Get a deaf player’s attention before you start speaking. Try waving, visibly knocking a table or tapping their shoulder lightly.
• Determine your player’s preferred method of communication (lip-reading, sign language, interpreter, etc.). Don’t be afraid to ask a player for their preferred method of communication or for any advice on how best to communicate with them. Encourage the player to ask if they need any additional communication support.
• Make sure your face is in the light and that you face the person when you are talking. You must be close enough for the player to clearly see your face/lips (3–6 feet away).
• If you are struggling to communicate initially with a deaf player use a pen and paper, a mobile phone or written instructions.
• Ensure that if the person uses an interpreter/signer that you talk to the person, not the interpreter/signer.
• Learn some basic fingerspelling or sign language (visit the Tennis Foundation website for links to some British Sign Language tennis videos).
• Always check the individual’s understanding of any instructions/information given.
• Speak clearly and naturally. Try to use an expressive face.
• Use visual cues, where possible. Point to what you’re talking about.
• Make it clear what the topic of conversation is – and let the person know if it’s changed.
• Use whole sentences to help deaf players pick up clues to what’s being said.

Don’t:
• Speak too slowly or shout – this will distort your lip patterns.
• Move your head or walk around while you’re talking. Speech movements can easily be missed.
• Have lots of noise in the background, e.g. from a TV or washing machine. Hearing aids amplify all noises, not just your voice.
• Take forever to get to the point.

Top Tips: Deaf Tennis

You should not assume that because someone identifies themselves as deaf that they have no hearing. It is important to establish how much hearing an individual has if you are both going to communicate effectively. Bear in mind these top tips when communicating with deaf players:
Disability Tennis Coaching Resource

- Cover or put anything in your mouth while talking. Eating or smoking while talking is a definite no-no.
- Make a deaf person lip-read for too long without a break.
- Give up. If stuck, try explaining in a different way or writing it down. Or, if you have a mobile to hand, text it on your screen.

Remember – every deaf person is different and deafness can range from mild to total. Some people may sign, some may lip-read, some may listen and some may speak. Some may do all these things. Always ask how the player prefers to communicate.

**Involve the Team**

It will be useful to discuss the guidance described above with squad members, parents/partners/carers and/or coaching assistants prior to, or shortly after, the deaf participant joining the team. The coach can also educate umpires about what can be done to assist the participant. Combine clapping with a double-handed wave to congratulate or praise. When we see something good, the natural reaction is to clap. The deaf community will use a raised double-handed wave to show the same appreciation, so use both methods for a mixed group.

**Communication Options and Approaches**

The information below describes the variety of communication options that are used by deaf people. Most deaf people will use a combination of these when communicating:

**Auditory-Oral Technology**

With the use of technology such as hearing aids and cochlear implants, many deaf people develop listening skills and spoken language.

**Lip-Reading**

This involves the ability to read lip patterns. However, many speech sounds look the same when spoken (e.g. ‘pat’ and ‘bat’) so it is difficult for deaf people to rely solely on lip-reading to communicate. Lip-reading is usually used alongside other communication approaches.

**British Sign Language (BSL)**

Over 70,000 people within the British Deaf Community use BSL. It is a visual language using handshapes, facial expressions, gestures and body language to communicate. BSL is an independent and complete language with a unique vocabulary. It has a structure and grammar different from that of written and spoken English. As with other languages, it has evolved over time and developed regional dialects. On 18 March 2003 the government officially recognised BSL as a minority language. A number of videos and images of tennis-specific BSL signs can be found on links from the Tennis Foundation website.

**Fingerspelling**

This is where each letter of the alphabet is indicated by using the fingers and palm of the hand. It is used for ‘signing’ names and places or for a word that doesn’t have a sign.

**Sign-Supported English (SSE)**

SSE uses signs taken from BSL. It is used in English word order but does not attempt to sign every word that is spoken. This may be an easier way to become familiar with sign language as it means that you can use signs together with your own language. As it uses the same signs as BSL, it can be helpful to children, parents and coaches who wish to develop BSL skills at a later stage.

**Signed English (SE)**

SE is an exact representation of the English language through the use of signs, where a sign is used for every spoken word. It is usually used in educational settings to develop written and spoken English skills. If a child uses only BSL to communicate they may not be able to fully understand SSE or SE due to the structural or grammatical changes.

**Makaton**

Makaton is a sign system that is used with children and adults (deaf and hearing), who may have communication and/or learning disabilities (for example, children with Down’s syndrome). It uses speech together with signs (taken from BSL) and symbols, and is grammar-free. Makaton can help children and adults who have difficulty with:

- Communicating what they want, think or feel.
- Making themselves understood.
- Paying attention.
- Listening to and understanding speech.
- Remembering and sequencing.

Makaton is a visual way to develop communication skills and helps stimulate sounds and words. This in turn helps to encourage language development, i.e. putting words together. Makaton helps understanding by giving the recipient a black-and-white symbol as an extra visual cue. Symbols are lasting and permanent, and give a child or adult more time to take in information.
**When using Makaton:**

- Only use the sign or symbol for the important word in the sentence.
- Remember to speak and sign at the same time.
- Use clear, short sentences.
- Remember to make eye contact and use facial expression, body language and gesture.
- Use real objects and mime to give reference and meaning. For example, when talking about a tennis racket, point to the racket; when talking about serving the ball, mime doing it.
- Use the sign and symbol for ‘Good’ to give praise.
- Have fun!

Above and below are some simple Makaton symbols and signs to help you with basic communication in tennis sessions.

Being able to communicate with a deaf player gives you as a coach great satisfaction and enables you to become a better coach in the hearing world. Many coaches have told us that it has really opened their eyes teaching deaf players as they didn’t realise that there were so many considerations to take into account.

Catherine Fletcher, Deaflympian and Great Britain Deaf Tennis Coach
Working with BSL Communicators

If there is a deaf player whose first language is BSL attending your activity or club then they may require the support of a volunteer communicator, communication support worker (CSW) or BSL interpreter to ensure they can fully communicate with the leader and other participants.

When working with communicators, it is important to be aware of the following points:

- Make sure that you let the communicator know in advance what you plan to do during a session – perhaps hand them a copy of the session plan. This will allow the communicator time to prepare and ask any questions about any aspects of the session that they may not understand.
- Position yourself so the player can see both you and the communicator clearly. Standing beside the communicator is usually the most effective way to do this.
- Talk to the group/player direct rather than to the communicator. Even if all the group members are deaf and are all looking at the communicator, you are still there to lead the players, not the communicator.
- Speak clearly and not too fast – it is hard work listening to someone speaking and then translating their words into BSL!
- Plan activities that give the communicator and the player(s) a break from watching.

This could include scheduling regular drinks breaks, or activities where less intervention is required from the leader.

- If you ask the group a question and you want a response, wait until the communicator has finished signing before allowing a response. This gives the players the chance to respond and the communicator more time to interpret.
- A deaf person cannot look at two places at once so, when demonstrating or working from a whiteboard or flip chart, build in a time lapse so that the players can look at you and then turn their attention to the communicator or whiteboard, otherwise they will miss the explanation.

- Try and use basic sign language yourself, even if the communicator is present. This will help you communicate direct to the player(s) and help build the same relationship with them as you would with a hearing player or group.

If you would like to learn BSL and communicate with BSL users then the best place to start is to take a course taught by a qualified sign-language teacher. Local courses can be found at www.signature.org.uk. You can also learn a few basics direct from a deaf person, or by viewing online learning tools or applications on your smartphone.
Communication Do’s and Don’ts

**DO’S**
- Be brief
- Keep still
- Have good light
- Make eye contact
- Speak one at a time
- Stay fairly close
- Stick to one point at a time
- Ask if you are being understood
- Take your time
- Speak clearly
- Write it down if you get stuck

**DON'TS**
- Shout
- Be too far away
- Mutter
- Rattle on and on
- Eat
- Hurry
- Obscure your mouth
- Look away or down
- Lean too close
- Be embarrassed
- Talk too fast
- Give up
- Speak with the sun behind you

The signs for numbers are used to show the score in points, games and sets.

Player Classifications

- Deaf players who meet the required hearing-loss level (see below) can compete in mainstream tennis activities and competitions, or in specific deaf tennis activities and competitions, or in a combination of both.
- Players may choose to play in specific deaf competitions as this provides an opportunity to socialise and meet other deaf people. Other players may choose to play in mainstream competitions as this may provide a higher level of competition and a wider variety of opponents.
- For international and national level deaf competitions, players must have a hearing loss of at least 55 decibels (dB HL) in the better ear.
- Hearing aids and cochlear implants must be removed to compete in international and national level deaf competitions.
- Players may want to train without hearing aids, to get used to the environment during a deaf tennis competition. Alternatively, players may wish to train with their hearing aids as this may support them to understand instructions, technical detail and feedback. Some players may also feel disorientated without their hearing aids.
- In the lead-up to deaf tennis competitions it is important that players practise and gain match experience of playing without their hearing aids or cochlear implants. Playing without hearing aids can affect orientation and balance, which is why this is recommended.
- Eligible players can compete in the Deaflympics, which are held every four years, and other major international deaf events.
- The Tennis Foundation manages training camps for national-standard players and organises events such as the annual National Deaf Tennis Championships.

Find out more at www.LDTennis.org.uk
Disability Tennis Coaching Resource

Learning Disability Tennis

Learning disability tennis is played with no adaptation to the rules of tennis. There are a number of learning disability tennis sessions available for beginner and developing players across the country and the game can be adapted according to a player’s ability. For example, playing Mini Tennis with softer balls and smaller courts can build confidence on court.

What is Learning Disability?

Learning disability is defined as a reduced intellectual ability and difficulty with everyday activities, which affect an individual for their whole life; for example, in carrying out household tasks, socialising or managing money.

General Characteristics of Learning Disability

People with a learning disability tend to take longer to learn and may need support to develop new skills, understand complex information, and interact with other people. The level of support an individual needs depends on specific factors, including the severity of their learning disability. For example, a person with a mild learning disability may only need support with simple tasks such as joining a sports club or getting directions to a venue. However, someone with a profound learning disability may need full-time care and support with every aspect of their life – they may also have physical disabilities.

Learning Disability or Learning Difficulty?

Learning disability is often confused with specific learning difficulties such as dyslexia, attention deficit hyperactivity disorder (ADHD) and some forms of autism. Mencap describes dyslexia as a learning difficulty because, unlike learning disability, it does not affect intellect.

In performance sport learning disability is defined as having an IQ of 75 or less, having significant limitations in adaptive behaviour, and this being evident before the person is 18 years old. This does not automatically exclude those with autism or other conditions. However, if autism or another condition is the primary or only diagnosis, then it is unlikely they would meet this particular definition to be eligible to compete in a learning disability event.

It is important to remember that, with the right support, most people with a learning disability or difficulty in the UK can lead independent lives. Sport provides invaluable life skills and social contact, as long as a positive and informed environment is available to people.

For the purposes of this resource, when we refer to learning disability tennis at a recreational level, we are including learning difficulties.

Including People with a Learning Disability in your Coaching Sessions

- Use a range of coaching styles, including lots of visual demonstrations.
- Don’t write down complex terms or draw tactical approaches on a board.
- Strive to have a predictable, consistent and organised coaching environment.
- Where relevant, provide accessible and easy-
to-read information, and consider other non-verbal communication techniques.

- Demonstrate specific coaching drills one element at a time, and build up slowly.
- Give simple, clear instructions, and repeat them frequently, breaking more complex tasks into simple steps.
- Find a mechanism, appropriate to your participant, to ensure that they understand your instructions and what they should do – don’t just assume they have understood.
- If possible, pair up your participant with a supportive fellow participant who has the ability to explain concepts clearly, concisely and patiently.
- Do not single out the participant in view of the group to explain more difficult concepts. Try to include further coaching while other participants are otherwise engaged. You could also provide them with some straightforward coaching tips written down to take away with them after the session.

Top Tips: General Communication

It is always good practice to ensure information is clear and concise. This may become particularly significant when transferring information or instruction to individuals who have a learning disability. Consider these Top Tips when communicating with players who have a learning disability:

- Ensure that you do not deliver large blocks of information – provide information in small, useable blocks.
- Do not finish the person’s sentences, or presume that you know what they mean before they have finished talking. Allow an appropriate amount of time for the individual to consider their response and give you their answer.
- Do not presume that because the person has a learning disability, they will not be able to answer your questions – they probably will. If the individual has a more severe degree of learning disability then it may be appropriate to speak to the parent, partner, friend or carer as well.
- Treat someone who has a learning disability according to their age, rather than presumed IQ.
- Use simple, uncomplicated language, and learn to use gestures and subtle changes to the tone and volume of your voice. This will play an important part in communicating your message.
- Always check for understanding. Do not use ‘do you understand?’ because they may say ‘yes’ and actually not understand. Ask the individual to demonstrate that they actually do understand by asking questions where they have to offer a clear response, e.g. ‘where do you go when you get to the red sign?’
- Repeat information if necessary and use different forms of communication if appropriate. Demonstrations will speak a thousand words.

Top Tips: Speech and Language

People with speech or language difficulties may not use the spoken word as a primary form of communication, or you may find it difficult to understand what they are saying. You should not assume that people who have speech or language difficulties have other impairments, or that they are unintelligent. Bear in mind these Top Tips:

- Do not ask for information and then finish their sentences. Ask the question and then allow time for the person to answer.
- Do not pretend you understand what has been said if you do not; ask them to repeat the question or response.
- If you still do not understand, apologise and use a more visual form of communication: write it down, draw it, point it out, use sign language or Makaton (more information in deaf tennis section), show them the way or ask them to show you what they mean.

Clarity of verbal information is very important, but becomes particularly important for people who may base a significant proportion of their actions on that format of communication.
Overview of Impairments and Coaching Awareness Top Tips

ADHD is an impairment of either activity or attention control, or both.

Common Characteristics of People with ADHD

1. Predominantly inattentive type
   - Being easily distracted, missing details, forgetting things and frequently switching from one activity to another.
   - Having difficulty maintaining focus on one task.
   - Becoming bored with a task after only a few minutes.
   - Having difficulty focusing attention on learning something new or completing tasks.
   - Not seeming to listen when spoken to.
   - Daydreaming, becoming easily confused and moving slowly.
   - Having difficulty processing information as quickly and accurately as others.
   - Struggling to follow instructions.

2. Predominantly hyperactive-impulsive type
   - Fidgeting and squirming in their seats.
   - Talking non-stop.
   - Dashing around, touching or playing with anything in sight.
   - Being constantly in motion.
   - Having difficulty doing quiet tasks or activities.

3. Combined type, which also includes:
   - Being very impatient.
   - Blurt ing out inappropriate comments, showing their emotions without restraint and acting without regard for consequences.
   - Having difficulty waiting for things they want or waiting their turn in games.

Including People with ADHD in your Coaching Sessions

- Be firm with rules, but remain calm and always have a positive approach.
- Match your coaching style to your participant’s learning style; understand this by speaking to them or their parent/partner/friend/carer prior to the session.
- Know when to ‘back off’ if the participant’s level of frustration or anxiety begins to peak.
- Look at the participant when communicating.
- Strive to have a predictable and organised coaching environment.
- Provide immediate and consistent feedback regarding positive behaviour.
- Try to develop a private signal system with the participant to notify them when they are off-task or acting inappropriately.
- When speaking or giving instructions to a group, use the individual’s name if needed to attract attention. (When asking everyone to ‘come here’, some individuals may need you to tell them specifically by name that you mean them too.)
**Autism Spectrum Disorder (ASD)**

**What is ASD?**

ASD is a lifelong developmental disability that can affect the way a person communicates and relates to others. It is called a spectrum as it shows itself in such a wide variety of ways, ranging from individuals who are pedantic about certain things to those with Asperger's syndrome (see separate section on Asperger's syndrome).

**Points to be Aware of when Coaching People with ASD**

The following points summarise many of the characteristics of people with ASD. It is important to understand that not everyone on the autism spectrum will have all of these characteristics; they may present only one or two of the following.

By understanding what ASD is, you will feel supported to make your sessions a more positive experience for all your participants.

**General Characteristics Of People With ASD**

- Difficulty with social interaction/relationships.
- May appear aloof and indifferent to others.
- May avoid eye contact.
- Difficulty in interacting with others.
- Unaware of others' feelings towards them and the impact of their own behaviour on others.

- Apparent insensitivity to peers.
- No concept of their role within a group.
- Little or no perception of danger.
- Resistant to change.
- Possess special interests.
- May have sensory difficulties such as under- or over-sensitivity to noise or light.

**Common Characteristics of People with ASD**

**General**

- Poor physical/motor skills.
- Obsessions, usually with toys or objects.
- High levels of anxiety.
- Lack of motivation.
- Depression and low self-esteem.
- Inability to transfer skills from one situation to another.
- Vulnerable and susceptible to exploitation.
- Challenging behaviour.
- Self-injury/self-harm.

**Imagination**

- Limited imagination; but some individuals can be over-imaginative and will 'know everything'.
- Limited understanding of concepts of playing or sharing and taking turns.
- Unusual or inappropriate playing behaviour.
- Inappropriate attachments to objects.
- May spin objects or themselves.

**Including People with ASD in Your Coaching Sessions**

- Use their name at the beginning of an instruction or question.
- Tell the participant what to do rather than what not to do.
- Use face-to-face interaction when possible.
- Use visual communication when possible.
- Help your participant to anticipate what will happen next (e.g. ‘When the ball is passed to Bill, who will Bill pass to?’).
- Give warnings of any changes that are about to happen (e.g. ‘John, in a few minutes, we will be moving on to a game’).
- Control the environment and don’t overstimulate (e.g. face them away from any distractions).
- Teach them the rules and use prompts/reminders to reinforce them.
- Provide a definite beginning and end to activities.
- Reduce anxiety with a confident and positive approach; the participant will feel safer knowing that if they lose control, you won’t.
- Provide a safe place and/or person the participant can go to when a situation becomes too much for them to cope with.

**Social Communication**

- May repeat/echo words or phrases.
- Inappropriate laughing or giggling.
- No or inappropriate response to sounds.
- Difficulty with expression, and so may need to use gestures.
- One-sided communication.
- Failure to respond to their name (unless looking at them).
- Failure to comply with general instructions when given to a whole group.
- Difficulty in understanding verbal communication.
- Difficulty in understanding non-verbal communication such as gestures, tone of voice and expressions.
**Asperger’s Syndrome**

**What is Asperger’s Syndrome?**

Asperger’s syndrome affects people in three specific areas:

- **Social interaction.**
- **Social communication.**
- **Social imagination.**

There are similarities with autism, but, on the whole, people with Asperger’s syndrome have fewer problems speaking and have average or above-average intelligence.

**In General, People with Asperger’s Syndrome:**

- Have poor physical/motor skills.
- Have difficulty understanding gestures, facial expressions or tone of voice.
- Have difficulty knowing when to start or end a conversation, and choosing topics to talk about.
- Use complex words and phrases, but may not fully understand what they mean.
- Are very literal in what they say and can have difficulty understanding jokes, metaphors and sarcasm; for example, a person with Asperger’s syndrome may be confused by the phrase ‘that’s cool’.
- Struggle to make and maintain friendships.
- Do not understand the unwritten ‘social rules’ that most of us pick up without thinking; for example, they may stand too close to another person, or start an inappropriate topic of conversation.
- Find other people unpredictable and confusing.

- Become withdrawn and seem uninterested in other people, appearing almost aloof.
- Behave in what may seem an inappropriate/antisocial manner.
- May imagine alternative outcomes to situations and find it hard to predict what will happen next.
- May misunderstand or interpret other people’s thoughts, feelings or actions; the subtle messages put across by facial expression and body language are often missed.
- May have a limited range of imaginative activities, which can be pursued rigidly and repetitively; for example, lining up objects or collecting and organising things related to their interests.
- May have rules and rituals that must be followed.
- Have a love of routine.
- Possess special interests.
- May have sensory difficulties.
- May have sensory difficulties such as under- or over-sensitivity to noise or light.

**Including People with Asperger’s Syndrome in Your Coaching Sessions**

- Be very literal in your explanations. Try not to use slang phrases, sarcasm or metaphors.
- Keep your explanations simple and concise.
- Use their name at the beginning of an instruction or question.
- Tell the participant what to do rather than what not to do.
- Use face-to-face interaction when possible.
- Use visual communication when possible.

- Help your participant to anticipate what will happen next (e.g. ‘When the ball is passed to Bill, who will Bill pass to?’).
- Give warning of any changes that are about to happen (e.g. ‘John, in a few minutes, we will be moving on to a game’).
- Control the environment and don’t overstimulate (e.g. face them away from any distractions).
- Teach them the rules and use prompts/reminders to reinforce them.
- Provide a definite beginning and end to activities.
- Reduce anxiety by adopting a confident and positive approach. The participant will feel safer knowing that if they lose control, you won’t.
- Provide a safe place and/or person the participant can go to when a situation becomes too much for them to cope with.
- Manage situations with other people you are coaching. Ensure they understand that this participant is not being rude if they don’t, for example, respond to conversation.
- Allow the participant ‘time out’ as and when they need it.
- Try to accommodate the need for structure and routine. Show the person your session plan and try to keep the structure the same for each session.
- Support their interest in the sport. Provide useful website addresses and books that might be interesting. Your encouragement may help develop the interest and skill of that person.
• **Down’s Syndrome**

**About Down’s Syndrome (DS)**

- DS is a genetic condition which occurs by chance.
- It is the result of an extra chromosome (number 21).
- It is both a learning and physical disability.
- It is the most common form of learning disability.
- One in every 1,000 babies is born with DS.

You may have heard that people with DS:

- Have a short life expectancy.
- Are always happy and affectionate.
- Are extremely strong.
- Are only born to older mothers.
- All look the same.

In reality, people with DS:

- Can and do live long and rewarding lives.
- Experience the same range of emotions as anyone.
- Are likely to be weaker due to hypotonia (decreased muscle tone).
- Are born more often to younger mothers.
- Are more likely to look like their family than another person with the condition.

**Coaching People with Down’s Syndrome**

It is best to adapt your methods as opposed to abandoning your coaching style.

- Some people may have physical implications, others have cognitive ones. Many have both.
- Many players will struggle with short-term memory, and retention of skills may take some time.
- Many players will struggle to deal with changes and progressions, and some may inadvertently forget them.
- Many players will struggle/excel in comparison to their peers due to physical, technical or cognitive ability.

Many, but not all, children with DS will exhibit the following factors that facilitate learning:

- Strong visual awareness and visual learning skills.
- Ability to learn/use sign, gesture and visual support.
- Ability to learn and use the written word.

I think when coaching a Down’s syndrome session, it gives you a chance to be a lot more individual and almost reflect upon your own coaching a lot more because the difference between individuals is so vast – you have to use a different and wide range of coaching styles.

Matt Maguire,
DSActive Sports Officer

- Ability to learn practically, with hands-on activity and demonstrations.
- Tendency to model behaviour and attitudes on peers and adults.
- Keenness to communicate and socialise with others.

Many, but not all, children with DS will exhibit the following factors that inhibit learning:

- Auditory and visual impairment.
- Speech and language impairment.
- Short-term and working memory problems.
- Shorter concentration span.
- Delayed motor skills which can cause clumsiness and manipulation issues.

When coaching players with Down’s syndrome, coaches should attempt to:

- Teach the fundamentals of tennis as with any group of players, including technical and tactical play.
- Concentrate on the group as a whole, yet aid players who may be struggling physically or mentally.
- Treat the players like any other as much is possible, including reprimanding unruly behaviour.
- Take into account specific learning profiles and focus on the visual side of coaching.
- Start with singular commands or points to allow players to fully grasp and subsequently retain information.
- Make progressions slight and easily recognisable. To change a game/drill fully, change the surroundings.
- Ensure that the session is always achievable for each player, and for advanced players add individual rules or tests.
Disability Tennis Coaching Resource

Competitive Opportunities for People with Learning Disabilities

The Tennis Foundation runs an annual National Competition, and there are other events run locally across the country. In addition, players can register with a Special Olympics Great Britain (SOGB) sports club in their local area and have the opportunity to compete at their level for their region, or in national or international Special Olympics Games. Remember this level of competition is open to all athletes of all standards and Special Olympics events are all participation events, not elite-level competitions.

Special Olympics GB is the largest provider of year-round sports training for children and adults with a learning disability:

- They are a recognised member of the Olympic family.
- Since their formation in 1978 as part of the global Special Olympics movement, SOGB has improved the lives of thousands of people with a learning disability through sport.
- There are an estimated 1.2 million people in Great Britain with a learning disability.
- There are currently 135 Special Olympics clubs in Great Britain providing training and competition in 26 sports.
- The programmes are delivered by hundreds of qualified coaches and volunteers, with over 8,000 athletes benefiting from their sports programme.
- Their programmes are designed to allow athletes of all ages to learn, enjoy and benefit from participation in individual and team sports.

- Their programmes are designed to allow athletes of all ages to learn, enjoy and benefit from participation in individual and team sports.

UKSA – UK Sports Association for People with Learning Disability

UKSA promotes, supports and facilitates talented athletes with a learning disability to excel in national and international sport. UKSA is responsible for classification of athletes with a learning disability from the UK and is the only official British member of Inas (see next page).

UKSA has four members: Scottish Disability Sport, Welsh Sports Association for People with Learning Disability, Disability Sports Northern Ireland and Mencap in England. It also works closely with the English Federation of Disability Sport and Disability Sport Wales.

UKSA supports and collaborates with the Tennis Foundation in its selection and management of the GB Team to Inas events (see next page). UKSA is the only conduit through which athletes with learning disability across a number of sports, including tennis, can compete in high-performance European and World Championship events, including the Inas Global Games.

Inas – International Federation for Sport for Para-Athletes with an Intellectual Disability

Inas is a global organisation that promotes inclusion and is a full member of the International Paralympic Committee, representing intellectual disability:

- Formed in 1985.
- Has a membership now of more than 50 nations.
- Represents thousands of athletes with an intellectual disability.
- Competition is not played in rating groups, so is based more on the higher-standard athlete.
- Has an office base in England and is supported by a huge volunteer workforce around the world.

Inas has become a member of the ICC – the International Co-ordinating Committee – which later in 1992 became the International Paralympic Committee.

The ‘1st World Games for Athletes with an Intellectual Disability’ were held in Sweden in 1989.

Ahead of the Barcelona Olympic Games in 1992, the first Paralympic Games were held in Madrid for ‘Persons with a mental handicap’; 70 nations competed.

A small programme for athletes with an intellectual disability was included in the Paralympic Games in Atlanta in 1996 and in Sydney in 2000.

The Inas sports programme has grown to incorporate more than 10 sports and reaches across five continents. Today the programme includes 15 annual events, including the World Global Games held every four years, and has over 2,500 athletes registered to compete at international level.
### Player Classification

Any athlete, regardless of their tennis standard, can enjoy the opportunity to compete. This is because the competition structure uses a learning disability tennis rating form to assess a player’s tennis ability, rather than their disability, and can then group them to compete with athletes of a similar ability, giving them an achievable and positive match-play experience.

The learning disability tennis rating form on the following page enables coaches to assess their athletes prior to competition. Coaches can observe the player during a coaching or match-play session and choose the appropriate statement in each category that matches the player’s ability. (Please note Level 1 is not used in competition as this is for players who can not hit a ball yet).

Ratings also determine what level of tennis a player should practice during a coaching session:

- Rated 1 to 3 – Red ball on a Mini Tennis Red court
- Rated 3 to 4 – Orange ball on an Mini Tennis Orange court
- Rated 4 to 5 – Green ball on a full-size court
- Rated 5 to 8 – Yellow ball on a full-size court

Performance Camps

The Tennis Foundation will identify and develop the most talented learning disability players, by delivering a world-class programme to sustain performance at the highest levels, focusing on professionalism, behaviour and commitment.

The athletes are selected through talent identification at the Tennis Foundation learning disability camps and from performances at competitions. Those selected must go through the eligibility and classification process, managed by the UK Sports Association, and become registered with Inas.

The players will then attend Tennis Foundation learning disability performance camps, which include coaching, sports science, and fitness. Each player will have an annual plan, including targets which have been set and agreed with the national coach and the player’s individual coach.

The majority of their training will be done weekly at their local tennis venue with their own coach, and will include individual lessons, group lessons (either learning disability or mainstream), gym/fitness/cardio sessions, hitting with more advanced players, and singles and doubles match play.

All players will be encouraged to compete in local club leagues, LTA competitions, learning disability tournaments organised by the Tennis Foundation and some events hosted by Special Olympics Great Britain.

For international competitions, players will compete in performance events sanctioned by Inas.
You can develop further knowledge by attending a Learning Disability Tennis CPD course.

To book on the Learning Disability Tennis CPD course, please log in with your British Tennis Member number to the LTA website and visit the coaches’ area: [www.lta.org.uk](http://www.lta.org.uk).
Visually Impaired Tennis

Find out more at www.VITennis.org.uk
Visually Impaired Tennis

Visually impaired tennis (VI tennis) was first conceived in Japan in 1984 and has since been played in many countries around the world and is now part of the Tennis Foundation’s Disability Tennis Strategy.

Visually impaired tennis is one of the newest versions of the game and is played on a smaller tennis court using smaller rackets, an audible ball and raised lines. Players who are totally blind are allowed three bounces while partially sighted players are allowed two bounces. Tape can be put on the court to create raised lines and players communicate at the start of each point to make sure their opponent is ready.

Coaching people with visual impairments can provide varying levels of challenge, as different people will have varying levels of sight. Some people may see nothing; some may see outlines; some may see a small area in detail but nothing around that area; some may see best in good light; some in poor light; some may have seen in the past and have a memory of how people move; and some may never have seen and will therefore have to learn everything by description. As a result, communication is key when coaching visually impaired people and you will need to talk to the participant prior to the session to understand their personal support needs.

As the sport is in the early stages of development, there aren’t yet formalised ITF rules for VI tennis competitions. But there is a generally accepted set of rules used in Great Britain and internationally in an increasing number of visually impaired events and competitions.

More information about various eyesight conditions can be found on the RNIB website: www.rnib.org.uk.

Coaching Considerations

When setting up your session think about an accessible venue, provision for guide dogs, keeping the court as de-cluttered as possible and ensuring as quiet an environment as possible. Artificial lights may affect players in different ways so check with them in advance and use tactile markers where necessary.
It is important when planning your sessions or competitions to take into account other visually impaired sports, so check local, regional and national calendars for clashes with sports such as goalball and blind football. Try to ensure there are accessible transport networks nearby as this may be a barrier to the success of your VI tennis session. Players may be able to share lifts or taxis from home, or meet at a station and travel together from there to the venue.

It is preferable to play VI tennis indoors as it is easier to control light and noise conditions. VI balls also work better in dry conditions without wind, so indoor tennis or badminton courts are good options.

Consider ‘colour contrast’ for players and the coach on court. For example, if there are dark green curtains ask players to wear light colours, or if it is a white sports hall then ask players to wear dark colours.

Depending on the participants, it may be beneficial to use assistant coaches or volunteers to help with any additional requirements.

**Top Tips: Visually Impaired Tennis**

Find out how much sight an individual has – do not be afraid to ask how well an individual can see. This will enable you to make sure your communication and coaching provision are appropriate. Ensure the player knows what is around them and who is present. Ask them if they want to be shown or guided around the environment.

If a visually impaired participant asks to be guided on to the court, hold your arm out for the person to hold and keep that arm relaxed and still. Do not take hold of the participant yourself, unless you have permission to do so.

Advise the participant that you are going to put them into a correct position or stance, and explain how you are going to do this, prior to touching them.

Keep background noise to a minimum and make sure you are clear and precise in your provision of verbal information. Try not to overcomplicate instructions or information and always check for understanding by the participant.

Take the opportunity to learn from players’ different eye conditions, as they will each find different strategies to compensate for their particular type of impairment, and this way you will be able to help another player with the same eye condition.

The provision of promotional material must be in clear, large, and easy-to-read format, with simple imagery. Word documents usually work best for screen readers and you can find help to create accessible promotional materials on the EFDS (English Federation of Disability Sport) website via the Further Information page in this resource.

Players are classified according to their visual field or visual sharpness, so someone completely blind is permitted more bounces of the ball than someone with a less severe visual impairment.

- B1 players (totally blind) – 3 bounces
- B2 players (partially sighted) – 3 bounces
- B3 players (partially sighted) – 2 bounces
- B4 players (partially sighted) – 1 bounce

(B4 players are currently not eligible for international competition)

Sight classifications are important as they promote fair and equal competition. Success at competitions should be defined by an athlete’s skill and ability, not their impairment. The sight classifications should give all athletes the confidence that they are competing against others on an equal basis. Players only compete against other players of the same sight classification.

To compete in national tournaments, players must have a classification from British Blind Sport. For international competitions, players must have an International Blind Sports Federation (IBSF) classification.
**Rules**

VI tennis follows standard ITF rules for tennis, as well as the following additions:

- No volleys are permitted during the game.
- A yellow or black VI ball, often referred to as a sound ball, is used as it makes a noise when it bounces to alert the player to its location. There are different manufacturers of VI balls but they all have the sound feature.
- To start, the server must call “Ready?” and await a response of “Yes”. Then the server calls “Play” before serving the ball to begin the point.
- If the ball hits the server’s opponent inside the playing area before the first bounce, it is a point for the opponent.
- If the ball hits the server’s opponent outside the playing area before the first bounce, it is a point for the server.

**B1 Players**

- Play is on a Mini Tennis Red court. For specific sizes please refer to the ITF website.
- Tactile lines should be used on all lines except for service boxes.
- Players have up to three bounces of the ball before returning a shot.
- During competition players must wear eyeshades.
- Maximum size of racket is 23 inches.

**B2, B3 and B4 Players**

- Play is on a Mini Tennis Orange court.
- B2s are allowed three bounces of the ball before returning a shot, B3s are allowed two, and B4s are allowed one.
- Maximum size of racket is 25 inches.

**Match-Play Considerations**

As the skills of a participant increase you can introduce some match-play scenarios, including:

- Introduce scoring. VI competitions are usually the best of 3 sets with a tiebreak at 6-6. One-set matches or shortened sets can also be played if time is restricted.
- The length of matches can vary depending on the scoring system and the length of rallies, so try to get players used to different amounts of time on court.
- If possible, enlist someone to umpire and call the lines, as this is generally difficult for the players to do themselves.
- Have volunteers collect the balls, as it will generally take players longer to do this themselves.
- If you are playing a mixed match, i.e. with sighted and non-sighted players, it is recommended that players with the same level of sight serve to each other.

You can develop further knowledge by attending a Visually Impaired Tennis CPD course. To book on the Visually Impaired Tennis CPD course, please log in with your British Tennis Member number to the LTA website and visit the coaches’ area: www.lta.org.uk.
Wheelchair Tennis

Find out more at www.wheelchairtennis.org.uk
Wheelchair Tennis

One of the fastest growing wheelchair sports in the world, wheelchair tennis integrates very easily with the non-disabled game since it can be played on any regular tennis court, with no modifications to rackets or balls. Wheelchair tennis players are allowed two bounces of the ball and can easily play against other wheelchair tennis players, as well as alongside or against non-disabled friends and family.

There are opportunities for players to enter tournaments from beginner level right up to the ITF Wheelchair Tennis Tour, where the world’s top players compete in three divisions - men, women and quad, which is for those with a disability in three or more limbs. As well as a number of events in Great Britain on the ITF Tour, there is a Wheelchair Tennis Development Series run by the Tennis Foundation open for absolutely anyone who would like to compete.

Coaching Considerations

These coaching considerations may not apply to all wheelchair users, but are common characteristics for this impairment. For greater clarity, it is recommended you ask the participant.

- Check participants’ range of movement; they may, for example, find it difficult to raise their arms above their head.
- There is a common assumption that if a participant is in a wheelchair, they cannot bear weight on their legs. Participants may be able to bear weight, depending on their impairment.
- Participants may tire easily during a session due to their lack of motor-skill efficiency.
- Participants may have a decreased breathing efficiency due to only their diaphragm supporting their breathing.
- Participants may struggle with temperature regulation – both hot and cold. For example, a tetraplegic may not be able to perspire and will, therefore, require water to be sprayed on them to avoid overheating.
- Make sure participants take in plenty of fluid during sessions.
- There may be a decrease in a participant’s range of movement due to, for example, a rod in the spine.
- Be aware of hot and cold surfaces, as participants may have a lack of sensation in their touch.
- Be aware and minimise the risk of common injuries that arise from propelling the wheelchair, such as blisters, abrasions and lacerations.
- There is the potential for damage such as cuts and bruises due to lack of sensation.
- Be aware that some participants may have equipment for bowel and bladder control.
- If transferring to a different wheelchair, participants should do this independently or with the help of a parent/partner/friend/carer, or with a trained individual. With higher levels of impairment, a hoist may be required for transfer.

Wheelchair Tennis

One of the fastest growing wheelchair sports in the world, wheelchair tennis integrates very easily with the non-disabled game since it can be played on any regular tennis court, with no modifications to rackets or balls. Wheelchair tennis players are allowed two bounces of the ball and can easily play against other wheelchair tennis players, as well as alongside or against non-disabled friends and family.

There are opportunities for players to enter tournaments from beginner level right up to the ITF Wheelchair Tennis Tour, where the world’s top players compete in three divisions - men, women and quad, which is for those with a disability in three or more limbs. As well as a number of events in Great Britain on the ITF Tour, there is a Wheelchair Tennis Development Series run by the Tennis Foundation open for absolutely anyone who would like to compete.

Coaching Considerations

These coaching considerations may not apply to all wheelchair users, but are common characteristics for this impairment. For greater clarity, it is recommended you ask the participant.

- Check participants’ range of movement; they may, for example, find it difficult to raise their arms above their head.
- There is a common assumption that if a participant is in a wheelchair, they cannot bear weight on their legs. Participants may be able to bear weight, depending on their impairment.
- Participants may tire easily during a session due to their lack of motor-skill efficiency.
- Participants may have a decreased breathing efficiency due to only their diaphragm supporting their breathing.
- Participants may struggle with temperature regulation – both hot and cold. For example, a tetraplegic may not be able to perspire and will, therefore, require water to be sprayed on them to avoid overheating.
- Make sure participants take in plenty of fluid during sessions.
- There may be a decrease in a participant’s range of movement due to, for example, a rod in the spine.
- Be aware of hot and cold surfaces, as participants may have a lack of sensation in their touch.
- Be aware and minimise the risk of common injuries that arise from propelling the wheelchair, such as blisters, abrasions and lacerations.
- There is the potential for damage such as cuts and bruises due to lack of sensation.
- Be aware that some participants may have equipment for bowel and bladder control.
- If transferring to a different wheelchair, participants should do this independently or with the help of a parent/partner/friend/carer, or with a trained individual. With higher levels of impairment, a hoist may be required for transfer.
Including Wheelchair Users in Your Coaching Sessions

- Every wheelchair user is different; it is recommended you ask the participants about their needs before the session. For example, check their range of movement.
- If participants are not using a sports wheelchair, they may not have an anti-tip system fitted to their chair. If this is an option on their chair, ensure it is fitted. If no anti-tip is fitted, reduce the risk of the chair tipping back during an activity (e.g. by reducing speed and quick turns), as this may cause head injuries.

Along with the STEPS outlined in the previous table, below are some additional tips to take into account.

Task
- Ensure the demonstrations/communication methods used will enable understanding.
- Adapt rules for the whole group or for individuals.
- Adapt the task for some participants so they can use adapted equipment.
- Adapt a game to use zones, so everyone can play.

Equipment
- A larger ball is easier to hit and receive.
- Can you make the length of a handle shorter/longer on a racket/bat?
- Can you reduce the height of targets (e.g. a lower net)?
- Is sport-specific specialist equipment available?
- Does the wheelchair have an anti-tip fitted?

People
- Ensure group dynamics – working in pairs and small groups.
- Vary groups – use mixed-ability groups and similar pairings, and ensure these are not the same for every session.
- Let them try – never assume they can’t do it, and work with them on adaptations; what works and what doesn’t?
- As a coach, your positioning is important for people to be able to hear and see you.

Safety
- Know your individual/group, their ability and potential.
- Know what precautionary action to take (e.g. medical, behavioural).
- Be aware of additional potential heat loss and dehydration with some groups.

“When coaching wheelchair tennis it is important to be aware of individual needs but also to ensure players are being helped to reach their potential as with any other athlete. I have found coaching wheelchair tennis has improved my understanding and the ability to listen and adapt to the player in front of me. It has also been great to get the chance to look at the sport from another angle.”

Phil Martin, Disability and Outreach Coordinator, Gosling Sports Park
Player Pathways and Classifications

- Players are classified by the International Tennis Foundation (ITF).
- Players compete in a sports chair.
- Players compete in one of three divisions (men’s, women’s or quad) on the ITF tour and at Paralympic Games.
- Both men and women compete in the quad division (this is not just for quadriplegics but anyone with a disability in three or more limbs as classified by the ITF).
- Players can compete in over 150 ITF-sanctioned events around the globe.
- Wheelchair tennis is now played as part of all the Grand Slam events.
- The ball is allowed to bounce twice in wheelchair tennis.
- The Tennis Foundation manages camps, competitions and the performance programme for players domestically.

Talent Identification

The overall aim of the Tennis Foundation’s Wheelchair Tennis Talent Programme is to identify and confirm a number of targeted individuals who already possess or, with fast-track support, are capable of developing the skills required by an elite wheelchair tennis athlete.

All Tennis Foundation wheelchair tennis activities, whether camps or tournaments, provide an opportunity for players to be fairly assessed and for those selected to receive the appropriate levels of support.

At the competitive level, wheelchair tennis is open to players who have a medically diagnosed permanent mobility-related physical disability, which must have resulted in a substantial loss of function in one or both lower extremities. This can include:

- Spinal injuries.
- Spina bifida.
- Limb loss.
- Hypermobility.
- Cerebral palsy.
- Other illness or injury that causes disability in the lower extremities.

Athletes that typically perform well at the elite level are:

- Those who retain core muscle function.
- Those with lower-limb loss.
- Those with prior competitive tennis experience.
- Those with experience in other wheelchair sports.

But a broad range of people can excel at wheelchair tennis, so please contact the Tennis Foundation’s Performance Team for more information about the talent pathway in the UK.

You can further develop your knowledge by attending a Wheelchair Tennis CPD course.

To book on the Wheelchair Tennis CPD course, please log in with your British Tennis Member number to the LTA website and visit the coaches’ area: www.lta.org.uk.
What to Teach:

Chair Mobility
The most important aspect of competitive wheelchair tennis is mobility (the ability to move and control the chair). For the new player this is also the most important part of getting fit and having fun.

Games / Drills
Anything you do with non-disabled players you can do with wheelchair players. Often Mini Tennis coordination and movement games can work well for beginners to get them used to using a tennis chair.

Ideas:
1. Propel the chair with 2 pushes and then roll (repeat using 2 pushes, 3, 4, etc). Also try propelling the chair and then keep moving with no hands on the wheel rims.
2. Practise small and large turns left and right. Also practise stopping and starting quickly.
3. Same as No. 2 above then throw the players a ball – they must catch it while chair is rolling. Have them catch it after one and two bounces to get them making decisions on the appropriate number of bounces.
4. Make this harder by catching using only one hand.
5. Do this again and when they catch the ball they have to throw it back.
6. Repeat exercise but when they throw it back they should make the shape of a forehand or backhand.
7. Get used to holding a racket while moving the chair by dribbling the ball as they move and trying exercises such as hit, bounce and then push to get into position for the next ball.
Relay races:
1. Push up to a designated point, turn the chair and sprint-push back before the next person takes their turn.
2. Slalom race – the same as above but push in and out of obstacles or around balls; make sure the chair is always moving.

Moving and Looking
• Players must always be looking at the ball or at their opponent, so make sure the player always looks over their shoulder when pushing away from the opponent or coach.
• Moving the chair and looking at the ball: stand with a ball behind your back while the player is in front facing you. Without them knowing which way you are going to point the ball, they must when they see the ball push towards the direction of it (left or right). Advance this one by pointing the ball either left or right and/or forward or back.

Wheelchair Tennis Mobility

Figure of 8
Player has to continuously push in a figure of 8 pattern left and right – the coach rolls a ball either left or right and the player rolls it back. You can do this with a throw and catch and also one or two bounces.

Teaching Points:
– Strong push on move ‘to ball’.
– Fast hands during reverse mobility.
– Sighting ball over shoulder during reverse mobility.
– The diagram shows the drill from the baseline but the figure of eight can be done anywhere on court.

Fan Drill
Player starts approximately 3-4 feet behind baseline at a cone (hub).
Player rounds each cone in turn (as shown) and returns around the hub.

Teaching Points:
– Movement.
– In-turn and out-turn on both sides (possible cross-hand turn).

SLALOM
Player pushes around cones as marked.
Player can use different hand combinations for pushing (together, alternate, single, etc).

Teaching Points:
– Carving through turns.
– Quick hand-speed.
Attack Into Defence
Player pushes around cones as marked.
Simulates one attacking shot down each line followed by a defensive recovery.

Teaching Points:
– Movement and positioning for attacking.
– Fast hand-speed and ball sight on recovery.

Variation:
Coach can throw a ball to each cone for the player to catch.

Spot Turns
Player pushes inside cones as marked.
Simulates a quick turn on the spot, turning as close to the cone as possible and accelerating away.

Teaching Points:
– Coordination for braking and quick turns.
– Fast hand-speed.

Variation:
Coach can throw a ball to each cone for the player to catch.
Shot Production

Forehand
- Grip - semi-western is most widely used and provides the most versatility, but many players use different grips, e.g. full-western or continental. Use what works for the player.
- Swing from low to high.
- Follow through up and across with varying degrees of extension depending on the intended ball flight.
- Watch the ball.
- Breathe out through contact.

The player should concentrate on the following things for the first three to six months:
- Semi-western forehand grip with small pre-swing loop and good extension, and completed follow-through. Contact with the ball should be just in front of the knees with the elbow in front of the body.
- Correct swing paths on the forehand so as to add more variety of top spin on the forehand side; the hand pulls the racket up and across the ball at contact.
- Loop shots, arc shots and a flatter put-away shot. These are all forehands but with different heights and weights of spin. If the player can identify them and start to see their tactical uses whilst learning them, technically it will help the player to become competitive more quickly.
- Forehand focus should be on a good swing path from below the ball (contact with a square racket face) to spin the ball, sending it higher than 3 feet over the net.
**Reverse Backhand**
- Same grip as forehand but inverted. Semi-western is best, but many players use different grip; e.g. full-western or continental. Use what works for the player.
- Aim to keep elbow level or higher than racket head and finish.
- Swing from below the height of the ball using arm extension followed by the shoulder rotation.
- Follow through out, up and across.
- Watch the ball.
- Breathe out through contact.

**Slice Backhand**
- Grip: continental is best for controlling the angle of the racket face (when working with quad players who need to tape, improvising with forehand grip is more common).
- Swing from above the ball, striking the back of the ball with a descending path (racket face slightly open). Shorter stroke than in non-disabled tennis.
- Stay on the ball as long as possible.
- Watch the ball.
- Breathe out through contact.
Serve
- Types: flat/slice/topspin.
- Grip: continental.
- Underarm serve may be needed for some players limited by disability.
- Physical and technical limitations.
- Every player is different.
- Balance (may need to take the wheel with arm after the toss for stability).
- Ball toss (straight and controlled), above eyeline for most serves.

Wheelchair Tennis Coaching Drills

These drills have been devised to develop consistency, especially under pressure situations, and are for more advanced players. You should attempt to stick with each drill until it is achieved. Start each session off with a different drill in order to achieve constant rotation of the programme.

Tracking the Ball
Coach feeds from control end of the court into the zones.

Player tries to anticipate and calls out the zone where they expect the ball to bounce.

Teaching Points:
- Perception and sighting.
- Movement.
- Appropriate return for zone.

Black Hole
Coach feeds (single ball or rally).

Player hits ball away from the ‘black hole’ (with appropriate choice of height, depth, distance, speed and spin).
Zone Hitting
Coach feeds from control end of the court.
Player returns appropriate shot into zones, but not into the same zone twice in a row.

Teaching Points:
- Perception and sighting.
- Movement.
- Appropriate return for zone (with relevant choice of height, depth, distance, speed and spin).

Decide Early
Coach feeds (single or rally). Player rallies to white, blue, red and green markers.
Player must call which marker they will hit prior to contact.

Teaching Points:
- Appropriate shot (with relevant choice of height, depth, distance, speed and spin).
- Early decision and preparation.

Rally in the Service Boxes
Before your main session starts, rally for five minutes in the service boxes and see what the longest rally is in that time. If at any time the rally breaks down, start again from 0. If, over time, achieving 30 shots becomes easy, then gradually increase the number of shots.

Rally from the Baseline
Rally to 30 shots from the baseline. If at any time the rally breaks down, start again from 0. If, over time, achieving 30 shots becomes easy, then gradually increase the number of shots.

Grooving Drill
Player rallies 15 shots back to the coach. If the 15-shot rally is achieved, the player goes 15-love up. If the rally breaks down, the coach goes 15-love up. Play a ‘set’ in this way. If, over time, 15-shot rallies become too easy, challenge the player by setting a target of 20 shots, then 20+ shots.

There are 4 options for this drill:
- Cross-court deuce side.
- Cross-court advantage side.
- Down the line deuce side.
- Down the line advantage side.
Deep-Short-Deep-Short
Player has to hit a shot from a deep position then push into court and play a second ball from around the service line. They then push at an angle back to the baseline and play a third shot from a deep position, finishing off the sequence with a final shot from the service line. If the player completes all four shots, they go 15-love up. If they make a mistake, the coach goes 15-love up. Play a ‘set’ in this way.

Option 2: Play a ‘set’ starting on the opposite side of the court.
Option 3: The drill can be made harder by setting a specific target for the final shot.

Approach and Volley
Player starts with a deep ball. They turn and push into court diagonally to play a second ball around the service line. Again they turn and push into court diagonally to play a volley. If the player completes all three shots, they go 15-love up. If they make a mistake, the coach goes 15-love up. Play a ‘set’ in this way.

Option 2: Play a ‘set’ starting on the opposite side of the court.
Option 3: After the volley, the player retrieves a cross-court lob. They then turn and push into court diagonally to play a fifth ball around the service line. Then they turn again and push into court diagonally to play a volley. Repeat for a determined set of shots.

Hustle Drill
Coach feeds six random balls all over court to push player to the limits of their mobility and player must get all six in court between the service line and baseline. If a player makes all six shots they get a point. If they make a mistake, the coach gets a point. Play a tiebreak in this way.

Half-Court Drill
Player serves and must hit 7 shots back cross-court to the coach. If they make 7 shots, they go 15-love up. If they make a mistake, the coach wins a point. Play a ‘game’ in this way. After every game the player wins, he needs to make an extra shot to win each point in the following game. After every game a player loses, he needs to make one less shot for each point in the following game, i.e. if the player wins the first game then he starts the next game serving from the opposite side of the court (deuce or advantage) and has to make 8 shots cross-court to win each point. If he loses the first game, he only has to make 6 shots to win each point of the next game. And so on.

Hit 20 Shots Back to Coach – Lateral Movement – Defensive
Player hits 20 shots back to the coach who remains on the same side (advantage or deuce) during the rally. The player has to move to either side alternately and return the ball to the coach’s side of the court. If the 20-shot rally is achieved, the player goes 15-love up. If the rally breaks down, the coach goes 15-love up. Play the next rally with the coach staying on the opposite side of the court. Play a ‘set’ in this way. If, over time, 20-shot rallies become too easy, challenge the player by setting a target of 30 shots.

Option 2: Play each game with coach on one side (deuce or advantage) then alternate coach’s side for the next game and so on.
Further Information

This resource has been put together by a number of experts in disability sport. Thank you to all of the individuals and organisations who have contributed.

For further information on disability tennis please contact the Tennis Foundation:
